

Positive voltage regulator ICs

Datasheet - production data

Description

The L78 series of three-terminal positive regulators is available in TO-220, TO-220FP, D²PAK and DPAK packages and several fixed output voltages, making it useful in a wide range of applications.

These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type embeds internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1 A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltage and currents.

Features

- Output current up to 1.5 A
- Output voltages of 5; 6; 8; 8.5; 9; 12; 15; 18; 24 V
- Thermal overload protection
- Short circuit protection
- Output transition SOA protection
- 2 % output voltage tolerance (A version)
- Guaranteed in extended temperature range (A version)

6 Application information

6.1 Design consideration

The L78 Series of fixed voltage regulators are designed with thermal overload protection that shuts down the circuit when subjected to an excessive power overload condition, internal short-circuit protection that limits the maximum current the circuit will pass, and output transistor safe-area compensation that reduces the output short-circuit current as the voltage across the pass transistor is increased. In many low current applications, compensation capacitors are not required. However, it is recommended that the regulator input be bypassed with capacitor if the regulator is connected to the power supply filter with long lengths, or if the output load capacitance is large. An input bypass capacitor should be selected to provide good high frequency characteristics to insure stable operation under all load conditions. A $0.33\ \mu\text{F}$ or larger tantalum, mylar or other capacitor having low internal impedance at high frequencies should be chosen. The bypass capacitor should be mounted with the shortest possible leads directly across the regulators input terminals. Normally good construction techniques should be used to minimize ground loops and lead resistance drops since the regulator has no external sense lead.

The addition of an operational amplifier allows adjustment to higher or intermediate values while retaining regulation characteristics. The minimum voltage obtained with the arrangement is 2 V greater than the regulator voltage.

The circuit of [Figure 13](#) can be modified to provide supply protection against short circuit by adding a short circuit sense resistor, RSC, and an additional PNP transistor. The current sensing PNP must be able to handle the short circuit current of the three terminal regulator. Therefore a four ampere plastic power transistor is specified.

Figure 25. Adjustable output voltage with temperature compensation

Note: Q_2 is connected as a diode in order to compensate the variation of the Q_1 V_{BE} with the temperature. C allows a slow rise time of the V_O .

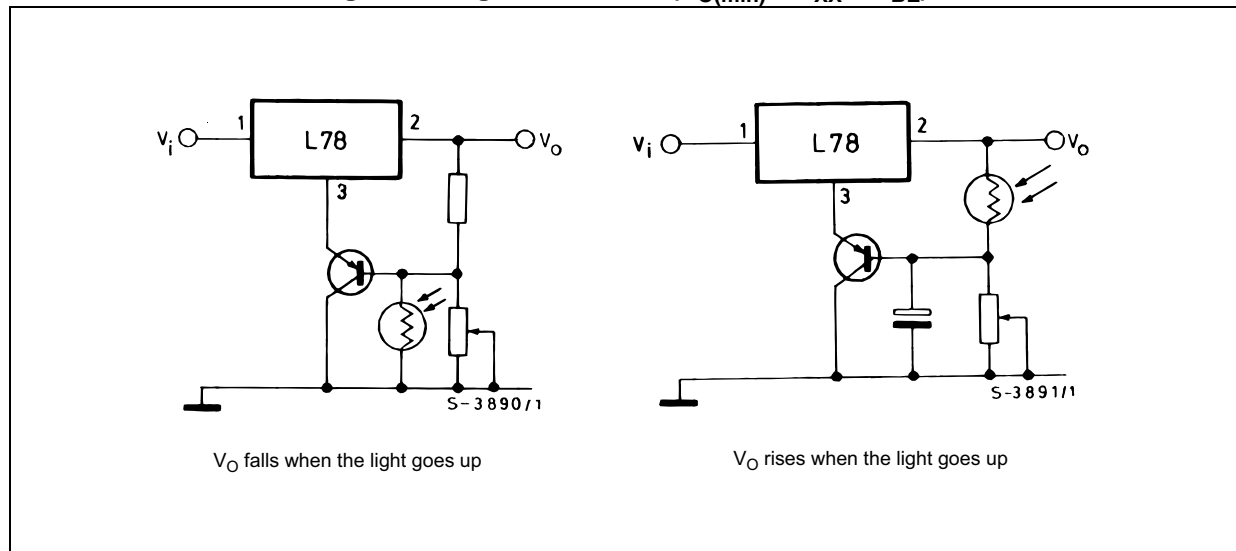

Figure 26. Light controllers ($V_{O(min)} = V_{XX} + V_{BE}$)

Figure 27. Protection against input short-circuit with high capacitance loads

Note: Application with high capacitance loads and an output voltage greater than 6 volts need an external diode (see [Figure 22 on page 31](#)) to protect the device against input short circuit. In this case the input voltage falls rapidly while the output voltage decrease slowly. The capacitance discharges by means of the base-emitter junction of the series pass transistor in the regulator. If the energy is sufficiently high, the transistor may be destroyed. The external diode by-passes the current from the IC to ground.

11 Revision history

Table 27. Document revision history

| Date | Revision | Changes |
|-------------|----------|---|
| 21-Jun-2004 | 12 | Document updating. |
| 03-Aug-2006 | 13 | Order codes has been updated and new template. |
| 19-Jan-2007 | 14 | D ² PAK mechanical data has been updated and add footprint data. |
| 31-May-2007 | 15 | Order codes has been updated. |
| 29-Aug-2007 | 16 | Added Table 1 in cover page. |
| 11-Dec-2007 | 17 | Modified: Table 26 . |
| 06-Feb-2008 | 18 | Added: TO-220 mechanical data Figure 38 on page 38 , Figure 39 on page 39 , and Table 23 on page 37 . Modified: Table 26 on page 55 . |
| 18-Mar-2008 | 19 | Added: Table 29: DPAK mechanical data on page 50 , Table 30: Tape and reel DPAK mechanical data on page 52 . Modified: Table 26 on page 55 . |
| 26-Jan-2010 | 20 | Modified Table 1 on page 1 and Table 23 on page 37 , added: Figure 38 on page 38 and Figure 39 on page 39 , Figure 45 on page 52 and Figure 46 on page 52 . |
| 04-Mar-2010 | 21 | Added notes Figure 38 on page 38 . |
| 08-Sep-2010 | 22 | Modified Table 26 on page 55 . |
| 23-Nov-2010 | 23 | Added: $T_J = 25\text{ }^{\circ}\text{C}$ test condition in ΔV_O on Table 3 , 4 , 5 , 6 , 7 , 8 and Table 9 . |
| 16-Sep-2011 | 24 | Modified title on page 1. |
| 30-Nov-2011 | 25 | Added: order codes L7805CV-DG, L7806CV-DG, L7808ABV-DG, L7812CV-DG and L7815CV-DG Table 26 on page 55 . |
| 08-Feb-2012 | 26 | Added: order codes L7805ACV-DG, L7805ABV-DG, L7806ABV-DG, L7808CV-DG, L7809CV-DG, L7812ACV-DG, L7818CV-DG, L7824CV-DG Table 26 on page 55 . |
| 27-Mar-2012 | 27 | Added: order codes L7812ABV-DG, L7815ABV-DG Table 26 on page 55 . |
| 27-Apr-2012 | 28 | Modified: $V_I = 10.4$ to 23 V ==> $V_I = 11.4$ to 23 V test conditon value Line regulation Table 6 on page 12 . |
| 10-May-2012 | 29 | Added: order codes L7806ACV-DG, L7808ACV-DG, L7815ACV-DG, L7824ABV-DG and L7824ACV-DG Table 26 on page 55 . |
| 19-Sep-2012 | 30 | Modified load regulation units from V to mV in Table 3 to Table 9 . |
| 12-Mar-2013 | 31 | Modified: V_O output voltage at $25\text{ }^{\circ}\text{C}$ min. value 14.4 V Table 16 on page 22 . |
| 04-Mar-2014 | 32 | Part numbers L78xx, L78xxC, L78xxAB, L78xxAC changed to L78. Removed TO-3 package. Updated the description in cover page, Section 2: Pin configuration , Section 3: Maximum ratings , Section 4: Test circuits , Section 5: Electrical characteristics , Section 6: Application information , Section 8: Package mechanical data and Table 26: Order codes . Added Section 9: Packaging mechanical data . Minor text changes. |
