GENERAL DESCRIPTION

The 8085A is a new generation, complete 8-bit parallel central processing unit (CPU). Its instruction set is 100% software compatible with the 8080A microprocessor. Specifically, the 8085A incorporates all of the features that the 8224 (clock generator) and 8228 (system controller) provided for the 8080A. The 8085A-2 is a faster version of the 8085A. The 8085A is a 3-MHz CPU with 10% supply tolerances and lower power consumption.

The 8085A uses a multiplexed data bus. The address is split between the 8-bit address bus and the 8-bit data bus. The on-chip address latches of 8155H/56H memory products allow a direct interface with 8085A. The 8085A components, including various timing-compatible support chips, allow system speed optimization.

- Notes: 1. A₈ - A₁₅ address Specs apply to IO/ \overline{M} , S₀, and S₁, except A₈ - A₁₅ are undefined during T₄ - T₆ of OF cycle; whereas, IO/ \overline{M} , S₀, and S₁ are stable.
2. Test conditions: t_{CYC} = 320 ns (8085A)/200 ns (8085A-2); C_L = 100 pF, V_{CC} = 5 V \pm 10%, V_{IL} = .45 V, V_{IH} = 2.4 V; V_{OL} = .8 V, V_{OH} = 2.0 V.
3. For all output timing where C_L = 150 pF use the following correction factors:
 25 pF \leq C_L < 150 pF: -0.10 ns/pF
 150 pF < C_L \leq 300 pF: +0.30 ns/pF
4. Output timings are measured with purely capacitive load.
5. To calculate timing specifications at other values of t_{CYC} use Table 3 on page 3-191 of the MOS Microprocessors and Peripherals Data Book (Order #09067A)
6. Data hold time is guaranteed under all loading conditions.
